How have we made our Programs perfect for NEET preparation?

Personalized Attention

Batches with hundreds of students are a norm in most of the NEET preparatory institutes. Through our interaction with students, we understood the difficulty of the students studying in large batches.

- Teachers are unable to monitor the students effectively.
- Students find difficulty in asking about doubts
- Teachers cannot see the working of students
- Teachers are unable to give any personalized attention to the students
- A Lot of disturbance decreases the efficacy of the class.
- By making smaller batch sizes and effective training of teachers we have eliminated these problems. Our objective is to cater to a small group of students but creates excellence.

We sincerely advise students to enquire about the batch size of the institute before admission. Most of the students studying in these big-sized batches will fail to succeed even if taught by the best teachers.

Immersive Teaching (Designed for NEET)

The major challenge faced by students preparing for NEET is the lack of proficient teachers. Teaching for NEET requires specific skillsets like

- Conceptual teaching rather than superficial teaching as among fact-based questions, many questions of NEET aim to test deep understanding of concepts.
- Teaching between the lines to make students realize how questions can be framed from the textbook.
- Teaching by interlinking concepts which helps in solving multi-concept-based questions.
- Creating concept recall points with anecdotes, mind maps, actual questions of NEET, etc.
- Choosing the right set of examples while teaching and many more tips and tricks to maximize performance in NEET.

Most of the NEET coaching Institutes lack qualified teachers. At FIITJEE Medical, teachers are recruited after a rigorous selection and training process.

A concept as a Unit

Our interaction with students showed that in most of the NEET Preparatory institutes, concepts are taught superficially without any focused concept-based assessment. We implemented the Academic Cult Metamorphosis process to ensure that every concept is Learned, Practiced, Tested, and Analyzed. Concept-wise tracking helps students to reinforce their weak areas.

Academic cult metamorphosis Increases your Thinking capacity, Learning speed, Retention power, problem-solving speed and Scoring ability. To know more about it check out the Academic Cult Metamorphosis section or meet our counsellors.

Concept Recall

While analyzing the problems faced by students preparing for NEET, we found many students could not answer a question because they could not recall the right concept at the right time. As the syllabus is vast it is difficult for a student to remember everything. But in NEET, the average response time per question is less than 01 minute, including reading time. After a deep thought process, our experts have developed a concept recall framework that helps students to retrieve the right concept at a much faster rate.

Math for Medical

During our research, we found that NEET aspirants who did not have mathematics in Class XI & XII found the questions of physics & chemistry mathematically difficult. Though mathematics is not tested in NEET, it is essential to overcome the mathematical challenges of physics & chemistry. We have designed our math for medical specifically to suit the needs of NEET aspirants by concentrating mostly on those concepts which would be useful for them to solve the problems of physics and chemistry. With Math for Medical, even students without mathematics in XI & XII can easily tackle the mathematical complexities of Physics & Chemistry.

Faculty Care

The student-teacher relationship is a vital element of one's learning curve. Many students find that their teachers were not approachable. We found that in many NEET Preparatory institutes, the teachers didn't even know the names of the students owing to the big batch sizes. We made student interaction a part of our faculty training program. Further, student mentoring & deep analysis sessions ensure teachers interact with each student in a one-to-one interaction.
At FIITJEE Medical we ensure that every student is attended by their teacher in one-to-one sessions through mentoring & a deep analysis framework. We earnestly request the student and parent to give deep thought to this while choosing the right coaching for NEET.

Speed and Accuracy

Solving one question per minute can be very challenging, especially when the syllabus is so vast as that of NEET. Students must have high speed with accuracy in solving the questions. To ensure better time management and give students practice on speed and accuracy we transformed many of our practice questions into timed assignments in digital format. It allows students to do time-bound assignments and keep a check on the time that they are consuming. The tests are designed to ensure that the students get enough practice in the NEET format. Rapid tests help students to improve their speed of solving questions.
